Welcome!

To the Geoview - Editing for OSR Applications
Online Training Course

The Alberta Department of Energy provides Geoview as a mapping interface to enable users to locate geographic information in Alberta, as well as Edit land tools.

This module outlines the functionality of Edit lands for the purposes of adding lands or modifying lands in an OSR Application.

Prerequisite: Please refer to the Geoview Overview module for a full review of the mapping tools offered.

Introduction

In this module you will learn how adding Schemes affects the application lands, access and use the Edit land tools used to update the lands in the application.

The following are reviewed:

- Map (Geoview)
  - Scheme/Application Lands
  - Launch Map
  - Edit Tools

- Editing Current Application Lands.
  - Defaulted Lands
  - Edit Tab
  - How to Add Land(s)
  - How to Remove Land(s)
    - from current application
  - How to request lands for removal from an existing approved project

Reference the module “Geoview Syst.Overview” for Map tool options.

Note: As this course demonstrates the use of the Geoview Edit tools, the data in some instances may not portray the actual Crown or Freehold ownership.
Current Application – Scheme/Land and Map (Geoview)

Schemes added to the current application will be used for determining the lands available.

By default, if a scheme is added which has available lands both the Land Tab, and the Map will be updated. *The defaulted lands are limited to the Development Area of the scheme record.*

Lands are recorded in the current application as either; Added lands, or Removed lands.

**Added land(s)** – these are lands treated as application lands.

**Removed land(s)** – these are lands which are part of an existing OSR Project, PILL, Pending Project, or Pending New Project which have been selected by the applicant for removal in the current application.

Application lands will be defaulted to those lands which are in the added Scheme(s) Development Area, and are not 100% freehold, or already in an OSR Project, Pending Application, or Pending New Project.
AER Approvals (Schemes) - Launch Map

The map can be launched from the Project Description tab / sub-tab AER Approval. The Launch Map function is located at the bottom of page.

The map will provide a graphical representation of the subject application by displaying all associated scheme land as well as the application ‘Added Lands’ (if applicable).

For Amendments or Amalgamations, additional information would be provided for the Approved Project(s), Pending Applications or Pending New Projects.

Use the map Edit tools to modify lands for the Current Application.

The following pages demonstrate how to edit the application lands.

Launch Map is only available to the user who represents the Primary Owner, and has the role of Creator or Delegate. For a Delegate to make edits, they must be assigned to the application.
Map – Initial Map View

Edit tool function will be enabled if;

a) Application has Project, Potentially Includable lands & Leases (PILL), or available lands via the added Scheme,

b) User represents the Primary Owner,

And

c) User is the Creator, or assigned Creator/Delegate.

Left Panel of the map screen defaults to the Land Keys in the application. If there are no lands added, the panel will be empty.

* details in Geoview Overview module
Geoview – Map Contents - Application Layer

The Map Contents panel will display layers specific to the current project application under the heading OASIS. Each layer can be turned On or Off.

The layers under OASIS are:

**Application** – represents the lands recorded for the Current Application.

- **Added Land** – land added in the Current Application.
- **Removed Land** - lands to be removed from an existing record; eg. Approved OSR Project, Approved PILL, Pending New Project, or Pending Application.

**Pending Application** – displays those lands requested under a prior submitted application on the same project.

**Project** – displays the existing OSR Project.

**Potentially Includable Leases and Lands** – displays those lands approved as PILL lands under the existing OSR Project.

**Oil Sands Scheme** – displays the AER Approval lands

**Oil Sands Development Area** – displays the Development Area lands for the AER Approval.

  *used when a previous instance was closed* |
Map – Add Lands to the Current Application

Lands can be added to the application by way of the ‘Application Added Lands’ Edit Layer.

Steps:

1. Set Selection layer
2. Click on the Select tool
3. Choose Appl.Added Lands [Edit Layer]
4. Click on the map to select Land(s)
5. Click Add Lands
Map – Add Lands to the Current Application (...continued)

1. Selected Lands will be identified in Information Panel under Land Selection

2. After Land has been selected, click on Add Land(s)
After clicking on Add Land(s), a validation screen is displayed.

Click on **Apply** to finalize the lands being added, or **Cancel** to return back to map.

Note: Validation will identify whether selected lands are allowed, if not an error message will appear.
Map – Add Lands to the Current Application (...continued)

After **Applying** the land changes;

a) the Map information (Land key tree & Land boundary) is updated and

b) the Lands tab in the application is updated.

1. Land Key Tree is updated.

   Note: ETS Request # is located above lands.

2. Land Boundary is adjusted to show allowed lands.
Map – Land Key Tree (sort order)

The **Land Key Tree** will display those lands which are in the application at the time of last saved action and land boundary will be adjusted accordingly.

Land Keys sort order are as follows:

- Meridian
- Range
- Township
- Sections
- Quarter Sections
- Legal Sub Divisions
- Quadrants

The icon for the Land Key Tree may be selected to display the lands.
Map – Remove Lands from the Current Application record

Lands which are recorded in the application as Added Lands can be removed.

Steps:

1. Set **Selection layer**
2. Click on the **Select** tool
3. Choose **Appl.Added Lands**
   [Edit Layer]
4. Click on the map to select Land(s)
5. Click **Remove Land**
Map – Remove Lands from the Current Application record (...continued)

After clicking on Remove Land(s), a validation screen is displayed.

Click on **Apply** to finalize the lands being removed, or **Cancel** to return back to map.

Note: Validation will identify whether selected lands are allowed for removal, if not an error message will appear.

---

1. Review lands before finalizing.

2. Click 'Apply' to finalize, or 'Cancel' to go back to map.

---

Cancel will close the popup window and return back to edit session.
Map – Remove Lands from the Current Application record (...continued)

After **Applying** the land changes;

a) the Map information (Land key tree & Land boundary) is updated and

b) the Lands tab in the application will be updated.

1. Land Key Tree is updated.

2. Land Boundary is adjusted for the removed lands.
Lands in an approved project may be requested for removal in an amendment application.

The lands requested for removal are recorded:

- under the Lands Tab as Current Application – Removed Lands,

and

- in the map as Removed Land; these lands with have a Red boundary.
Map – Amendments – Existing Approval project lands requested for removal (Continued)

Land edits, for the purpose of removing lands from and an existing approved project need to be made using the Edit layer “Appl.Removed Lands”.

Since the ‘Appl.Removed Lands’ record represents lands to be removed from an existing approved project; your land selection on the map may be followed by the action;

- ‘Add lands’ to record additional lands to be removed from the existing project.

or

- ‘Remove lands’ to record less lands to be removed from the existing project.

Cancel will close the popup window and return back to edit session.
Map – Amendments – Existing Approval project lands requested for removal (Continued)

Land which are recorded in an approved project may requested for removal. These lands would be identified under the Edit Layer “Application Remove Lands”.

To add approved project lands to the Remove land record follow these steps.

Steps:
1. Set Selection layer
2. Click on the Select tool
3. Choose Appl.Removed Lands [Edit Layer]
4. Click on the map to select Land(s)
5. Click Add Land
Map – Amendments – Existing Approval project lands requested for removal (Continued)

After clicking on Add (to the Removed Land record) a validation screen is displayed.

Click on **Apply** to finalize the lands being removed, or **Cancel** to return back to map.

Note: Validation will identify whether selected lands are allowed for removal, if not an error message will appear.

Cancel will close the popup window and return back to edit session.
Validation Results - Errors

While editing, if an action is performed which is contrary to the Business Rules allowing the action, a warning window will appear. Here are some examples:

1. Error-Land(s) outside of the Oil Sands area:
   - 4-13-062: 15
   - 4-13-062: 16
   - 5-14-080: 8

2. Error-Land(s) not available:
   - 5-03-087: 13

3. Error-Land(s) already part of Added Lands:
   - 4-13-062: 16
Congratulations!

You have completed the Geoview – Editing for OSR Applications Online Training Course

Supplemental training materials are available and can be accessed from the Alberta Energy Online Learning home page under:

- Interactive Map – GeoView System Overview
- Oil Sands – Create New OSR Project Application
- Oil Sands – Create an Amendment OSR Project Application
